

Lab Order

QuantIFERON®-TB Gold (86480)

Fatou Manneh

Final, Reviewed

Diagnosis: Screening examination for pulmonary tuberculosis (Z11.1)

Ordered by Laura Bernabe DeLaCruz MA on behalf of Rachel Hellesto, ARNP on 4/9/2018 (Routine)

Collected on 4/9/2018 8:55 AM

Requisition: 1117209

Reported on 4/11/2018 9:00 AM (QUEST)

Reviewed by Rachel Hellesto ARNP on 4/11/2018 3:49 PM

Test Name	Result	Units	Normal Range	Status
QUANTIFERON(R)-TB GOLD	NEGATIVE		NEGATIVE	Final, Reviewed

Note:

Negative test result. M. tuberculosis complex infection unlikely.

NIL	0.36	IU/mL	Final, Reviewed
MITOGEN-NIL	>10.00	IU/mL	Final, Reviewed
TB-NIL	0.01	IU/mL	Final, Reviewed

Note:

The Nil tube value is used to determine if the patient has a preexisting immune response which could cause a false-positive reading on the test. In order for a test to be valid, the Nil tube must have a value of less than or equal to 8.0 IU/mL.

The mitogen control tube is used to assure the patient has a healthy immune status and also serves as a control for correct blood handling and incubation. It is used to detect false-negative readings. The mitogen tube must have a gamma interferon value of greater than or equal to 0.5 IU/mL, higher than the value of the Nil tube.

The TB antigen tube is coated with the M. tuberculosis specific antigens. For a test to be considered positive, the TB antigen tube value minus the Nil tube value must be greater than or equal to 0.35 IU/mL.
