Filtering Facepiece N95 Respirator (FIT) Test Record

I FATOU MANNEH certify that I have done Qualitative Fit Testing and I understand the use of N95 Filtering Facepiece Respirators, including:

- How to properly Don/Doff and adjust N95 respirator masks
- Where the PPE (Personal Protective Equipment) is located in the facility
- How the respirator protects me from Covid, and when I need to wear it
- The N95 respirator's capabilities and limitations
- How improper fit, use, or storage can make N95 respirators ineffective
- When and how to temporarily store my N95 so it doesn't get damaged, contaminated inside or spread contamination at work. How to properly re-inspect my N95 prior to reuse
- What to do if my N95 respirator is defective, gets damaged, or somehow doesn't perform as it should
- The company's obligation under the Respiratory Rule, Chapter 296-842 WAC and where to review a copy of the company's written Respirator Program.

I now feel confident to use my N95 Respirator, in the event of Covid-19 outbreak in my facility. If I have a problem with the fit, comfort or other use issues, or if I could benefit from additional N95 respirator user training, I can contact the Respirator Program Administrator at my facility for assistance.

I have been medically cleared for N95 respirator use by an Advanced Medical Education LLC Licensed Medical Professional, or by an outside agency, with written proof provided to and reviewed by Advanced Medical Education LLC.
